

EDUCATION

South China University of Technology

B.Eng. in Information Engineering · GPA 3.7/4.0

Guangzhou, China

2017 — 2021

SKILLS SUMMARY

- **AI applications:** Owned the architecture and delivery of an AI product for ad creative and campaign workflows, spanning multimodal creation, asynchronous generation, creative replication and integration with advertising use cases.
- **Full-stack engineering:** Specialize in cross-platform and frontend development with React Native, React and Flutter; also build Go services for business orchestration, async jobs and reliability.

PROFESSIONAL EXPERIENCE

ByteDance, Douyin E-commerce

Frontend Engineer · Mobile & Cross-platform

Hangzhou, China

Jun 2021 — Apr 2026

Built shopping, storefront and short-video experiences. Worked across Native, web and cross-platform surfaces while balancing interface quality, rendering speed, release safety and reliability.

- **Storefront and discovery:** Built reusable store-entry components and core browsing experiences across products, search, livestreams, profiles and sharing.
- **Mixed rendering:** Helped combine Native lists with Lynx-driven merchant sections, making storefront modules both stable and fast to iterate.
- **Partner components:** Worked on the migration of third-party store modules to Lynx, plus debugging, preview and caching workflows.
- **Commerce across hosts:** Integrated e-commerce capabilities into Toutiao, Fanqie Novel, Xigua Video, Wukong Browser and Dongchedi.
- **Content and AI:** Improved in-feed shopping cards and prototyped an AI gift assistant with generated content, a virtual guide, realtime voice and agent Q&A.

APPROACH

In technical exploration, I follow open-source projects and emerging AI applications: identify approaches worth learning from, study how their core capabilities work, reproduce them quickly, and adapt them to actual needs.

SELECTED PROJECTS

AI Ad Creation & Campaign Platform ↗

2026 · Startup project

Product & Engineering Lead / AI application

Built for ad creative production and campaign delivery, the project combines an AIGC canvas with an advertising agent. I led the canvas architecture and delivery from the ground up, covering scripts, image and video generation, and creative replication; worked to connect creative assets with campaign workflows across frontend, backend and model integration.

Douyin E-commerce X AI Innovation

2025 · ByteDance

AI application exploration / Agent development

Worked with Douyin E-commerce's AI innovation team on product prototypes. Built the frontend and multi-feed content experience for an AI content app and its content management platform; maintained the gift assistant's agent conversations and asset management, integrated Coze workflows with Volcano Engine models for content generation, and explored phone comparisons and AI-written product copy.

Shopping Cards in Short Videos

2025 — 2026 · ByteDance

In-feed commerce / Interaction

Brought product value, store context, coupons and pricing into short-video viewing. Improved card interactions, promotional styles and motion while accounting for first-screen performance, experiment rollout, measurement and weak-network fallback.
