

EDUCATION

South China University of Technology

B.Eng. in Electronic and Communication Engineering

Guangzhou, China

2017 — 2021

SKILLS SUMMARY

- **Focus:** High-traffic commerce, mobile and cross-platform interfaces, AI product prototypes, interaction and performance.
- **Tools:** Web frontend, React Native, Lynx, multi-host integration, realtime voice and AI agent experiences.

PROFESSIONAL EXPERIENCE

ByteDance, Douyin E-commerce

Frontend Engineer · Mobile & Cross-platform

China

Jun 2021 — Apr 2026

Built shopping, storefront and short-video experiences. Worked across Native, web and cross-platform surfaces while balancing interface quality, rendering speed, release safety and reliability.

- **Storefront and discovery:** Built reusable store-entry components and core browsing experiences across products, search, livestreams, profiles and sharing.
- **Mixed rendering:** Helped combine Native lists with Lynx-driven merchant sections, making storefront modules both stable and fast to iterate.
- **Partner components:** Worked on the migration of third-party store modules to Lynx, plus debugging, preview and caching workflows.
- **Commerce across hosts:** Adapted product, store and transaction capabilities for Toutiao, Fanqie Novel, Xigua Video, Wukong Browser and Dongchedi.
- **Content and AI:** Improved in-feed shopping cards and prototyped an AI gift assistant with generated content, a virtual guide, realtime voice and agent Q&A.

APPROACH

I work across the full path from user intent to implementation: clear information design, reusable cross-platform components, measurable exposure and click flows, performance budgets, and graceful fallback under weak networks or partial failure.

SELECTED PROJECTS

AI Gift Assistant

2025 · ByteDance

AI application / Product prototype

Explored gift selection through AI-generated product highlights and recommendation copy. A virtual guide introduced products; users could continue through realtime voice or text, while an agent answered questions about products, recipients and reasons to buy. The prototype tested how generated content, character and conversation can form one continuous shopping experience.

Native × Cross-platform Storefront

2023 · ByteDance

Rendering architecture / Store experience

Kept the store identity area Native for reliable app behavior, while recommendations, livestream products and rankings used configurable cross-platform sections. Worked on the boundaries between layers, list behavior, data contracts, performance and graceful fallback.

Third-party Store Components

2023 · ByteDance

Lynx ecosystem / Developer tools

Helped move merchant-built store sections from H5 containers into the Lynx rendering path. The work covered component debugging and preview, visual consistency, caching policy and differences between host apps.

Multi-host Commerce SaaS

2022 · ByteDance

Product, store and transaction surfaces

Packaged commerce capabilities for several content apps as configurable, observable surfaces. Adapted entry points, data contracts and interface behavior to each host while keeping the underlying user experience and engineering boundaries consistent.

Shopping Cards in Short Videos

2025 — 2026 · ByteDance

In-feed commerce / Interaction

Brought product value, store context, coupons and pricing into short-video viewing. Improved card interactions, promotional styles and motion while accounting for first-screen performance, experiment rollout, measurement and weak-network fallback.
