

EDUCATION

South China University of Technology

B.Eng. in Information Engineering · GPA 3.7/4.0

Guangzhou, China

2017 — 2021

SKILLS SUMMARY

- **AI applications:** Built frontend experiences and workflow integrations for an AI content app and gift assistant POC, including content browsing, asset management and agent conversations.
- **Cross-platform engineering:** Build mobile and cross-platform experiences with React Native, React, Flutter and Lynx, with attention to rendering performance, staged rollout and weak-network fallback.

PROFESSIONAL EXPERIENCE

ByteDance, Douyin E-commerce

Frontend Engineer · Mobile & Cross-platform

Hangzhou, China

Jun 2021 — Apr 2026

Built shopping, storefront and short-video experiences. Worked across Native, web and cross-platform surfaces while balancing interface quality, rendering speed, release safety and reliability.

- **Storefront and discovery:** Built reusable store-entry components and core browsing experiences across products, search, livestreams, profiles and sharing.
- **Mixed rendering:** Helped combine Native lists with Lynx-driven merchant sections, making storefront modules both stable and fast to iterate.
- **Partner components:** Worked on the migration of third-party store modules to Lynx, plus debugging, preview and caching workflows.
- **Commerce across hosts:** Integrated e-commerce capabilities into Toutiao, Fanqie Novel, Xigua Video, Wukong Browser and Dongchedi.
- **Content and AI:** Improved in-feed shopping cards and prototyped an AI gift assistant with generated content, a virtual guide, realtime voice and agent Q&A.

APPROACH

In technical exploration, I follow open-source projects and emerging AI applications: identify approaches worth learning from, study how their core capabilities work, reproduce them quickly, and adapt them to actual needs.

SELECTED PROJECTS

Douyin AI Content & Gift Assistant POC

2025 · ByteDance

Frontend engineering / AI workflow integration

Built the multi-feed experience for an AI content app and its content management interface so generated assets could be viewed and managed. In a gift assistant POC, maintained Agent conversations and assets and integrated Coze workflows with Volcano Engine models to demonstrate a gift-shopping conversation.

Douyin In-feed Shopping Card

2025 — 2026 · ByteDance

Interaction engineering / Reliability

Presented product value, post-coupon prices and purchase actions over short videos without obscuring the content or slowing the initial render. Led iterations on coupon flows, price animations and the video mini-player; improved staged rollout, weak-network fallback, exposure and click tracking, and monitoring for experiments at 100M+ page-view scale.
