AI Engineer

EDUCATION

South China University of Technology

B.Eng. in Information Engineering · GPA 3.7/4.0

Guangzhou, China

2017 — 2021

SKILLS SUMMARY

- **AI applications:** Owned the architecture and delivery of a multimodal content creation product, spanning canvas interactions, model integration, asynchronous generation and video replication.
- **Full-stack engineering:** Work across frontend interaction, backend orchestration, async jobs and reliability with TypeScript, React and Go, plus React Native and Lynx cross-platform experience.

PROFESSIONAL EXPERIENCE

ByteDance, Douyin E-commerce

Frontend Engineer · Mobile & Cross-platform

Hangzhou, China

Jun 2021 — Apr 2026

Built shopping, storefront and short-video experiences. Worked across Native, web and cross-platform surfaces while balancing interface quality, rendering speed, release safety and reliability.

- **Storefront and discovery:** Built reusable store-entry components and core browsing experiences across products, search, livestreams, profiles and sharing.
- **Mixed rendering:** Helped combine Native lists with Lynx-driven merchant sections, making storefront modules both stable and fast to iterate.
- **Partner components:** Worked on the migration of third-party store modules to Lynx, plus debugging, preview and caching workflows.
- **Commerce across hosts:** Adapted product, store and transaction capabilities for Toutiao, Fanqie Novel, Xigua Video, Wukong Browser and Dongchedi.
- **Content and AI:** Improved in-feed shopping cards and prototyped an AI gift assistant with generated content, a virtual guide, realtime voice and agent Q&A.

APPROACH

I work across the full path from user intent to implementation: clear information design, reusable cross-platform components, measurable exposure and click flows, performance budgets, and graceful fallback under weak networks or partial failure.

SELECTED PROJECTS

AIGC Infinite Canvas

2026 · Startup project

Product & Engineering Lead / AI application

Designed and developed an AI creation canvas from the ground up for scripts, images, video generation and video replication. Owned the canvas architecture, core workflows and product iteration across frontend, backend and model integration.

AI Gift Assistant

2025 · ByteDance

AI application / Product prototype

Prototyped gift discovery with AI-generated product copy, a virtual guide, realtime voice and agent Q&A, connecting product recommendations with a conversational shopping flow.

Native × Cross-platform Storefront

2023 · ByteDance

Cross-platform rendering / Store experience

Combined a Native store header with Lynx-driven recommendations and livestream sections. Moved third-party modules from H5 into the cross-platform rendering path, covering preview tools, data contracts, caching and fallback.

Multi-host Commerce SaaS

2022 · ByteDance

Product, store and transaction surfaces

Packaged commerce capabilities for several content apps as configurable, observable surfaces. Adapted entry points, data contracts and interface behavior to each host while keeping the underlying user experience and engineering boundaries consistent.

Shopping Cards in Short Videos

2025 — 2026 · ByteDance

In-feed commerce / Interaction

Brought product value, store context, coupons and pricing into short-video viewing. Improved card interactions, promotional styles and motion while accounting for first-screen performance, experiment rollout, measurement and weak-network fallback.
